Overview of Pheripherals Theory

1. **Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments')**

Printer	Type	Real Life Use
	Inkjet Printer	Printing high-quality family photos at home
	Laser Printer	Printing high-volume black-and-white office documents
	Thermal Printer	Used in retail stores, restaurants, and supermarkets for fast billing and credit card receipts
Scanner		
	Flatbed Scanner	Digitizing old, fragile pages from a family photo album
	Sheet-fed (Document) Scanner	Rapidly scanning stacks of double-sided tax documents for digital archiving
Webcam		
	Integrated Laptop Webcam	Attending daily virtual team meetings while working from home
	External 4K Streaming Webcam	Broadcasting live gameplay streams on Twitch or YouTube

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

**3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility.**

Connection Interface	Speed	Advantage	Disadvantage
1. USB (Wired)	Generally fast	Provides a fast, stable connection and is easy to set up.	Requires a cable and limits the distance between devices.
2. Wi-Fi (Wireless)	Moderate to fast; depends on network strength	Allows multiple devices to connect to a printer or scanner without cables.	Requires a Wi-Fi network and may experience connection issues or slower speeds
3. Bluetooth (Wireless)	Generally slower than USB and Wi-Fi	Provides a convenient, cable-free connection over short distances.	Has a shorter range and is generally slower than USB for large data transfers.

4. Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Connecting a Printer to a Computer Using Wi-Fi

Device chosen: Home printer
Connection method: Wi-Fi (wireless)

Step-by-step instructions:

1. Check the printer: Make sure the printer supports Wi-Fi connectivity.

2. Turn on the printer: Connect the printer to a power outlet and switch it on.

3. Connect the printer to Wi-Fi: Open the printer's wireless settings, select your home Wi-Fi network, and enter the password.

4. Connect the computer: Make sure the laptop or PC is connected to the same Wi-Fi network as the printer.

5. Install the printer driver: If required, download and install the correct printer driver from the manufacturer's official website.

OR

Download the printer manufacturer's application, if required, and follow its instructions to detect and set up the printer.

6. Add the printer: On Windows, go to Settings → Bluetooth & devices → Printers & scanners and select Add device. On macOS, go to System Settings → Printers & Scanners and add the printer.

7. Test the connection: Open a document, select the wireless printer, and print a test page to confirm that it works correctly.

Conclusion: Wi-Fi allows a computer to print documents without using a cable. It is convenient for home use because multiple devices can share the same printer over a wireless network.
